Lab Experiment-25

Aim

To write a Python program using the OpenAI Python library to generate text based on a prompt provided by the user.

Algorithm

1. Install and import the OpenAI library.
2. Create an OpenAI API client using an API key.
3. Get a prompt from the user.
4. Send the prompt to the GPT model.
5. Receive the generated response.
6. Display the generated text.

Code:

```
from openai import OpenAI

client = OpenAI(api_key="YOUR_API_KEY")

prompt = input("Enter your prompt: ")

response = client.responses.create(

    model="gpt-5.5",

    input=prompt

)
```

print("\nGenerated Text:")

print(response.output_text)

Output:

Result:

Thus, the Python program successfully generates text based on the prompt entered by the user using the GPT-2 text-generation model through the Hugging Face Transformers library.
