Lab Experiment-26

Aim

To write a Python program using the Hugging Face Transformers library to translate English text into French.

Algorithm

1. Import the pipeline function from the Transformers library.
2. Load the pre-trained English-to-French translation model.
3. Get English text as input from the user.
4. Pass the input text to the translation model.
5. Generate the French translation.
6. Display the translated text.

Code

```
from transformers import pipeline

translator = pipeline(
    "translation",
    model="Helsinki-NLP/opus-mt-en-fr"
)

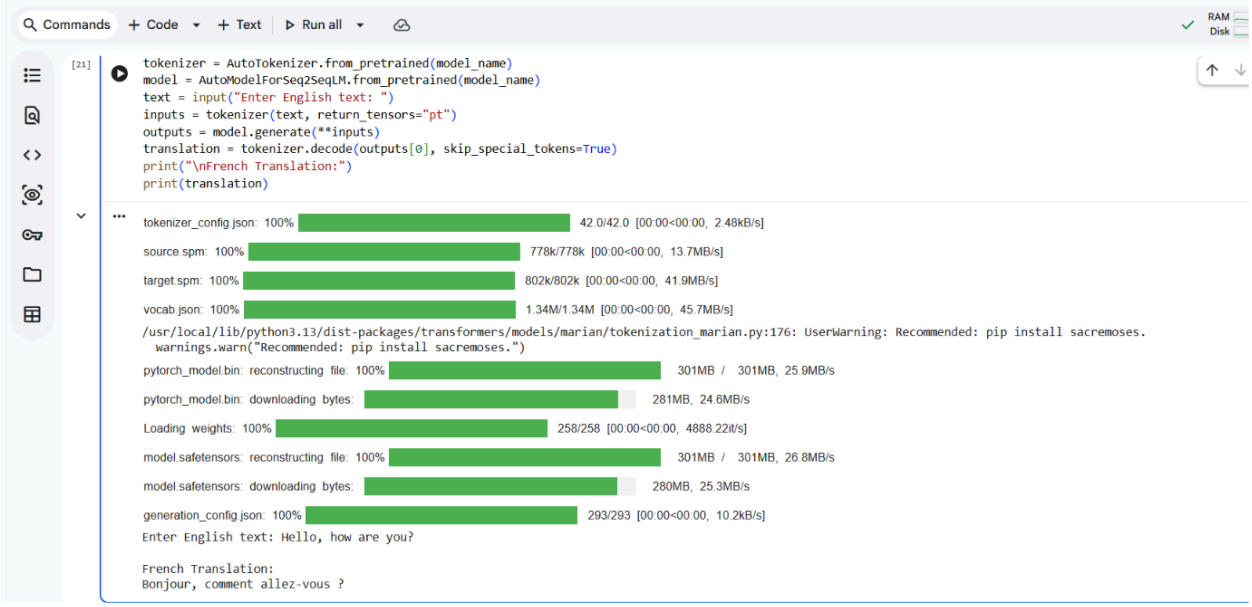

text = input("Enter English text: ")

result = translator(text)

print("\nFrench Translation:")
```

print(result[0]["translation_text"])

Output:

Result

Thus, the Python program successfully translates English text into French using the Hugging Face Transformers library.
